FOLLOW THE INSTRUCTION FOR RECTANGULAR/SQUARE CUTTING

- Ensure that at least 5 mm space is left between the edge of the slab and the point where the hole has to be made. The radius of the corners must be a minimum of 3 mm.

- Angles cut without necessary radius length create a stress point, whereas the large radius maintains the structural resistance. Make sure to never leave the corners with 90° angle cuts.

- Use a drill bit 3 to 5 mm to drill corners of the cut-out.

- Use a bridge saw running to cut from one hole to the next. Ensure the bridge saw is running at minimum speed to decrease the stress on the slab.

OTHER INSTRUCTIONS

- When cutting a "U" shaped piece, mark and drill relief holes where the cut lines intersect, always make the shortest cut first.

FOLLOW THE INSTRUCTION FOR ROUND CUTTING

- Use the sticky tape and pen to mark a circle.

- Start at an angle of 45 degree slowly.

- Angle drill to vertical position 90 degree once round trace made.

- Slow down speed for exit holes.

WHAT TO AVOID

- Never cut the tile without using water
- Never cut the tiles without laying on sand carpet
- Never cut the tiles at a fast speed.

- When cutting an "L" countertop, drill relief holes where the cut lines intersect, always make the shortest cut first.
